

Work with Java 32 version

[1] Current Spiso-3D doesn't work on Java 64 bit. → You need to use Java 32 bit.

Download Java 32 bit from the following website.

<https://www.oracle.com/java/technologies/javase/javase8-archive-downloads.html>

【jre-8u191-windows-i586.exe】 should be downloaded.

If Java 64 bit is already installed on your computer, it should be uninstalled before installing Java 32 bit.

[2] ImageJ 1.50i (Java32bit version) should be used.

We confirmed that ImageJ 1.50i works without any trouble on Java 1.8.0_191 (32-bit).
